

ABBEVILLE MEDICAL CENTER IMAGING BUILDING

Abbeville Area Medical Center was in need of adding a new MRI unit to their existing facility. Due to limited space and the need for a permanent location for their new MRI machine, Abbeville Area Medical Center found that a modular building would be more cost efficient, opposed to a mobile unit. The design had to maintain a cohesive architectural aesthetic with the existing campus, the placement had to fit within the available footprint, and the construction had to be carried out in a manner that did not disrupt daily medical operations.
