MODULAR

## NEUROLOGY & STROKE ASSOCIATES IMAGING BUILDING

With the absence of a local MRI, patients of the Neurology and Stroke Associates in Lititz, Pennsylvania were forced to travel to surrounding cities for scans. For the independently owned and operated practice to improve their patient's experience they sought to add their own system, but zoning and limited space for new construction would make this a challenge. Following a lengthy and detailed six month submittal process, VESTA, along with the civil engineer, developed a solution that would adhere to the zoning requirements and allow for the installation of a new Phillips 3.0 Tesla MRI system. The design also allowed for the expansion of the practice's infusion treatment chairs.
