

MAJOR RETAIL PHARMACY TEMPORARY PHARMACY

A retail pharmacy had an urgent need for building space at multiple retail locations in Chicago and Minneapolis; they required temporary pharmacies to continue serving customers during renovation and rebuilding of their existing stores. As the General Contractor, Sevan Multi-Site Solutions contacted us to determine if modular buildings could be provided to meet their client's requirements quickly, efficiently and with minimal site disruption. They were provided temporary buildings for three sites: one in Chicago and two in Minneapolis. The temporary buildings were placed adjacent to the main stores, taking into consideration accessibility, utilities, traffic flow, and ongoing renovations. After installation, Sevan coordinated the build-out of the modulars to create the interior spaces for pharmacy, retail, restroom, office and consultation room. The modular pharmacy buildings will remain in place until the existing stores are fully renovated and stocked with inventory, at which point our team will dismantle and return them to our facility. These projects were delivered and installed within approximately 6 weeks from contract award!
