

## TWO-STORY MIDDLE AND HIGH SCHOOL MODULAR CAMPUS

### THEA BOWMAN Jr High/ High School Campus

Leaders of the Thea Bowman Leadership Academy identified the need to extend their elementary and middle school program to include a high school. The new facility would house both the middle school and high school, giving much needed room for expansion at the elementary school. The programming design included a facility that would house both middle and high school students.

Our team worked with the architect, school board, and the school's authorizer, to design and construct the two-story modular classroom building, site-built gymnasium, and site-built administrative wing. The design utilized individual wings for the middle and high schools, which were connected and separated by a central core of common shared services such as the media-center, science laboratories, art rooms, and cafeteria.

The combination of modular and traditional construction techniques allowed for a "Phased Opening" of the facility, which allowed the academy to occupy the modular classrooms and support areas of the building for the opening day of school, followed by the finishing of the site-built gymnasium and administrative wing. This "Hybrid" construction method improved the project schedule and met the academy's budget while maintaining an excellent educational environment

#### Project Details

Customer: Thea Bowman  
Project Location: Gary, IN  
Building Type(s): Classrooms  
Total Sq. Ft.: 80,000  
New or Used Building: New  
Job Type: Sale
