

UNIVERSITY OF TEXAS - SAN ANTONIO

Student Success Center

UTSA was looking for a building to consolidate all student advisors under one roof. This would provide efficiency both for the students in seeking advice from their various advisors and for the advisors to collaborate together. Constructing a 30,000+ sq ft office building in the heart of campus during semester with minimal disturbance to the students was the site challenge. Our modular construction model met that challenge and delivered. VESTA was engaged at the project inception to play a lead role in designing the building and establishing the project budget while maximizing the efficiency and effectiveness of utilizing the modular building solution. Throughout the project, VESTA coordinated with the Architect and University officials in the design of this office building. VESTA handled the manufacturing, delivery and installation of the modules in addition to the various site scopes to successfully complete the building.
