MODULAR

WELLSPAN HEALTH AND SURGERY IMAGING BUILDING

Wellspan Health & Surgery Center required the addition of an MRI unit to their existing facility. Originally, Wellspan was looking to add a mobile imaging trailer to fulfill their need. Due to limited space and cost, our team was contacted to provide a solution for a permanent building to house a Philips Ingenia Elition 3.0T X MRI. The Wellspan design had to maintain a cohesive architectural aesthetic with the existing campus, the placement had to fit within the available footprint, and the construction had to be carried out in a manner that did not disrupt daily medical operations. With a brick exterior, the modular building blends effortlessly into the overall medical center. Modular construction proved to be an effective solution because not only did it minimize operational disruption, it also allowed site work to progress while the building was being constructed.
